Allison and Richard – Today, there was petroleum sheen observed in the creek between the roadway and the creek mouth to the lake. There are salmon redds in the gravels at the mouth of the creek, and we asked for assistance from USFWS/NOAA NMFS to monitor the creek/wetland where the salmon are and to suggest ways to address.

This plan was the result of the phone call at 1:15 today with the parties involved. Sorry we missed including you, and will try to think of that next time.

Not sure what more would be needed on your end to facilitate getting them out to the field.

Don

**Subject:** Lindsey Lake Spill Response: Schedule for Site Monitoring Tomorrow at Noon  
**Importance:** High

Mike and Tom – Thank you for agreeing to assist with wildlife observations and recommendations for proceeding with response (while protecting ESA) at the Lindsey Lake Spill site tomorrow. I believe the meetup will be at Viento State Park, and you should plan to be there with PFDs and weather appropriate clothing by noon. The ICP will apparently have lunch there for you, but I suspect a large thermos of coffee would be in order.

The field operations crew will pre-clear the area with respect to any potential for hazardous air conditions...with the plan that if such conditions exist, there will be no entry into the area.

Look for an e-mail tonight to make sure the plan has not changed, but wanted you to know about this so you can begin making final arrangements.

If your work tomorrow indicates that we should plan for a much more aggressive SCAT effort before next week, please let us know.

Any questions/concerns/missing information, please let me know...and again THANKS!!

Don
